

## (a) Conventional

The source code is hidden.  
There is no link between  
the source code  
and the published paper.

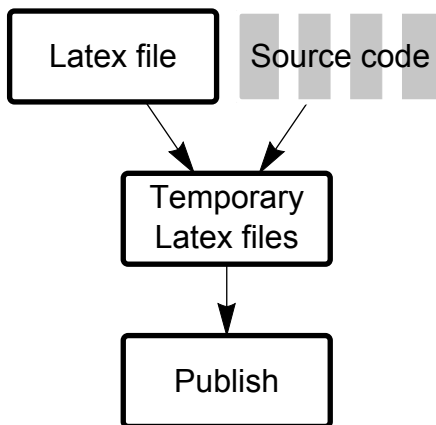

## (b) Literate programming

Although no code is hidden,  
there is usually so much of  
it that not all can be  
reliably read by a human.

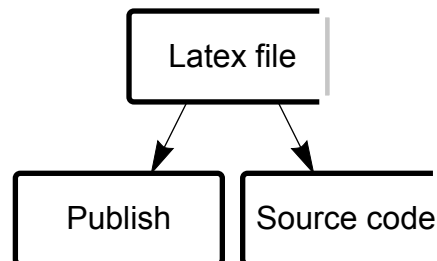

Hidden code  
is shaded

## (c) Loom & Warp

Some code is visible  
but the bulk needed to get  
things to work is hidden  
even from the authors.

## (d) This paper

A negligible amount  
of code may be hidden,  
but only with effort and it  
is still in the same file.
